

About us

InfoCamere is the company of the Chamber of Commerce System for Digital Innovation. Our mission is to simplify relations between enterprise and the Public Administration, by providing them with all the Chamber of Commerce databases.

Since 1993 we have managed the telematic Register of Companies (www.registroimprese.it), one of the first computerized registers in Europe and a real national economic database to all effects. By digitalising the Chamber of Commerce information, we enable enterprise, professionals, the general public and the Public Administration to have easy access to the official and up to date information in the Register of Companies, Default Register, Patents and Brands database and the European Registers of Companies.

CHAMBER of
COMMERCE
NETWORK
connected

In accordance with our vision of an “enterprise scale digital system”, we have organized the Register so that it is not just the immediate access gate to the Chamber of Commerce databases, but a real virtual office that is always open to the public.

A tool that enterprise and professionals can use to perform online all the administrative obligations relative to the establishment and life of a company, saving time and resources.

InfoCamere manages the Chamber of Commerce data from a Cloud in the Padua Operations Data Centre*, connecting the Italian Chamber of Commerce offices through a data network that unites the entire country. At the same time in Milan a second Data Centre acts as Disaster Recovery Centre and second Access Point to the network.

Our mission

InfoCamere activities range from managing the wealth of data of the Chambers of Commerce, to creating and managing last generation services provided centrally via internet and intranet.

*The Padua Operations Data Centre complies with Tier III level of the international standard TIA-942, as requested by Agid; the Data Security Management System is ISO 27001 certified.

In assisting the entire Chamber of Commerce system in digitalizing and simplifying their institutional processes that involve enterprise and the Public Administration, InfoCamere pays special attention to issues such as boosting competitiveness and the growth of the entrepreneurial fabric.

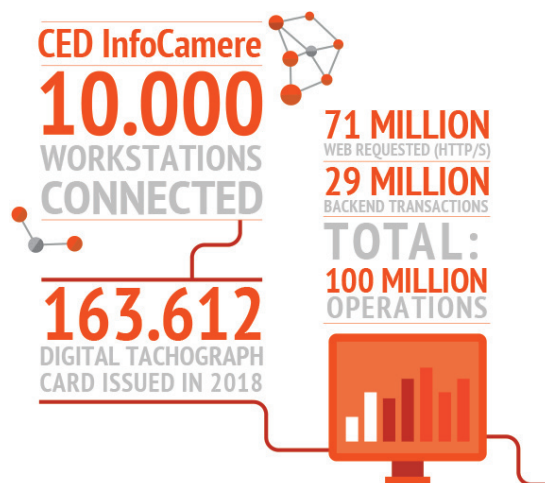

With focus always on digital enterprise in our country, we have developed some fundamental services to transform complex processes into user-friendly solutions, such as digital signatures and electronic invoices.

With the creation of ICONTO, the Payment Institute registered with the Bank of Italy, we have also strengthened the central role of the Chambers of Commerce in the relations between enterprise and the PA, offering them the chance to open effective accounts that are accessible from the entire banking system, and integrated into the telematic services offered by the Chambers of Commerce.

Service catchment basin

- > 350.000 private users
- > 30.000 PA users
- > 9.600 Chamber of Commerce users
